

**Oil cooler selection checklist**

Please answer as much as possible, where applicable

What type of cooler? Tube and shell(water cooled) / Air Blast (Fan cooled) / plate

Is it an existing Cooler?

If so, what are the dimensions?

What is the current oil temperature?

What is the desired oil temperature?

What is the water temperature (if tube and shell)?

What is the ambient air temperature (if air blast)?

What is the input KW?

Any other info / comments:
